

eCat Data Model Visual Guide

eCat Data Model: Understanding

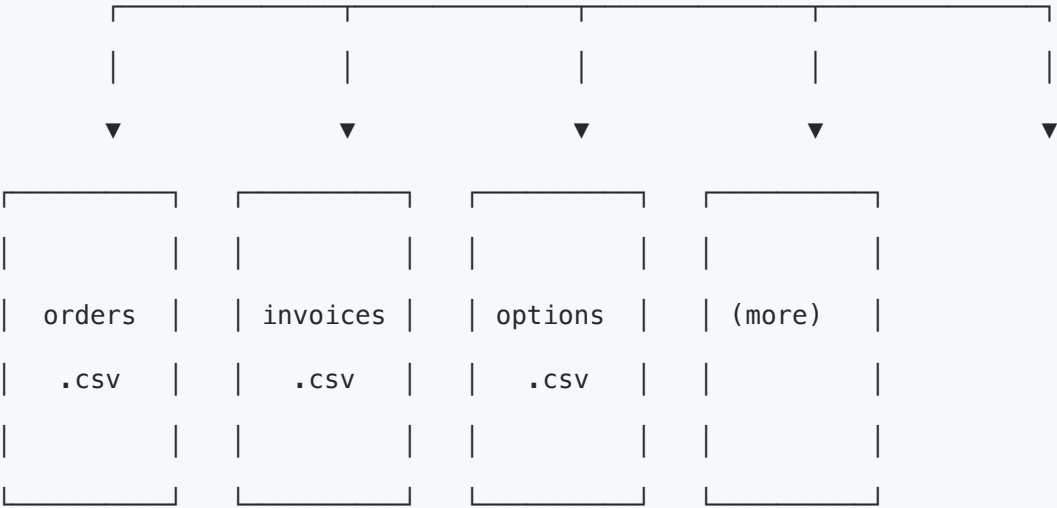

Your Data Files

The Big Picture: From Your Systems to eCat

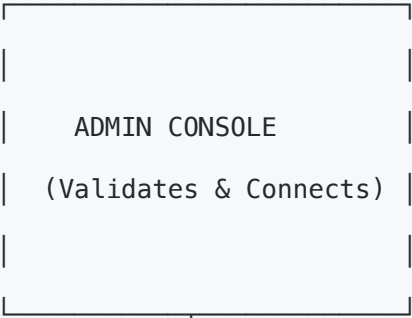

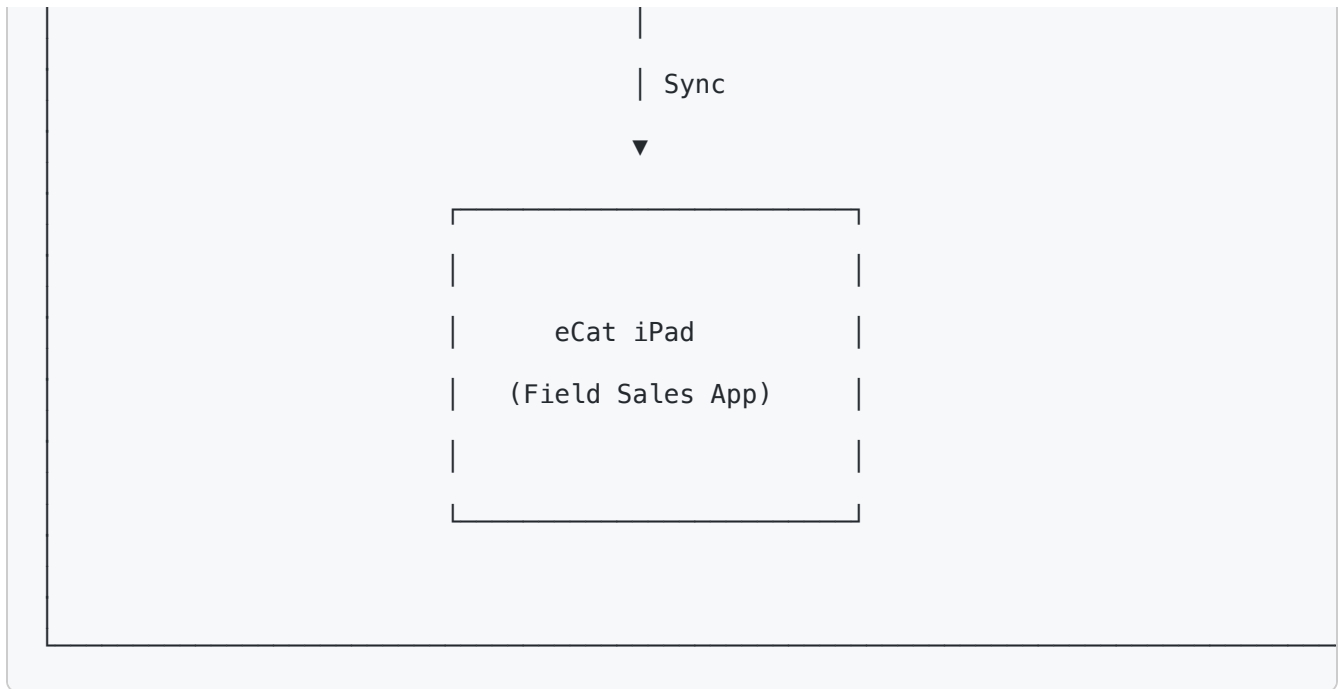

OPTIONAL FILES

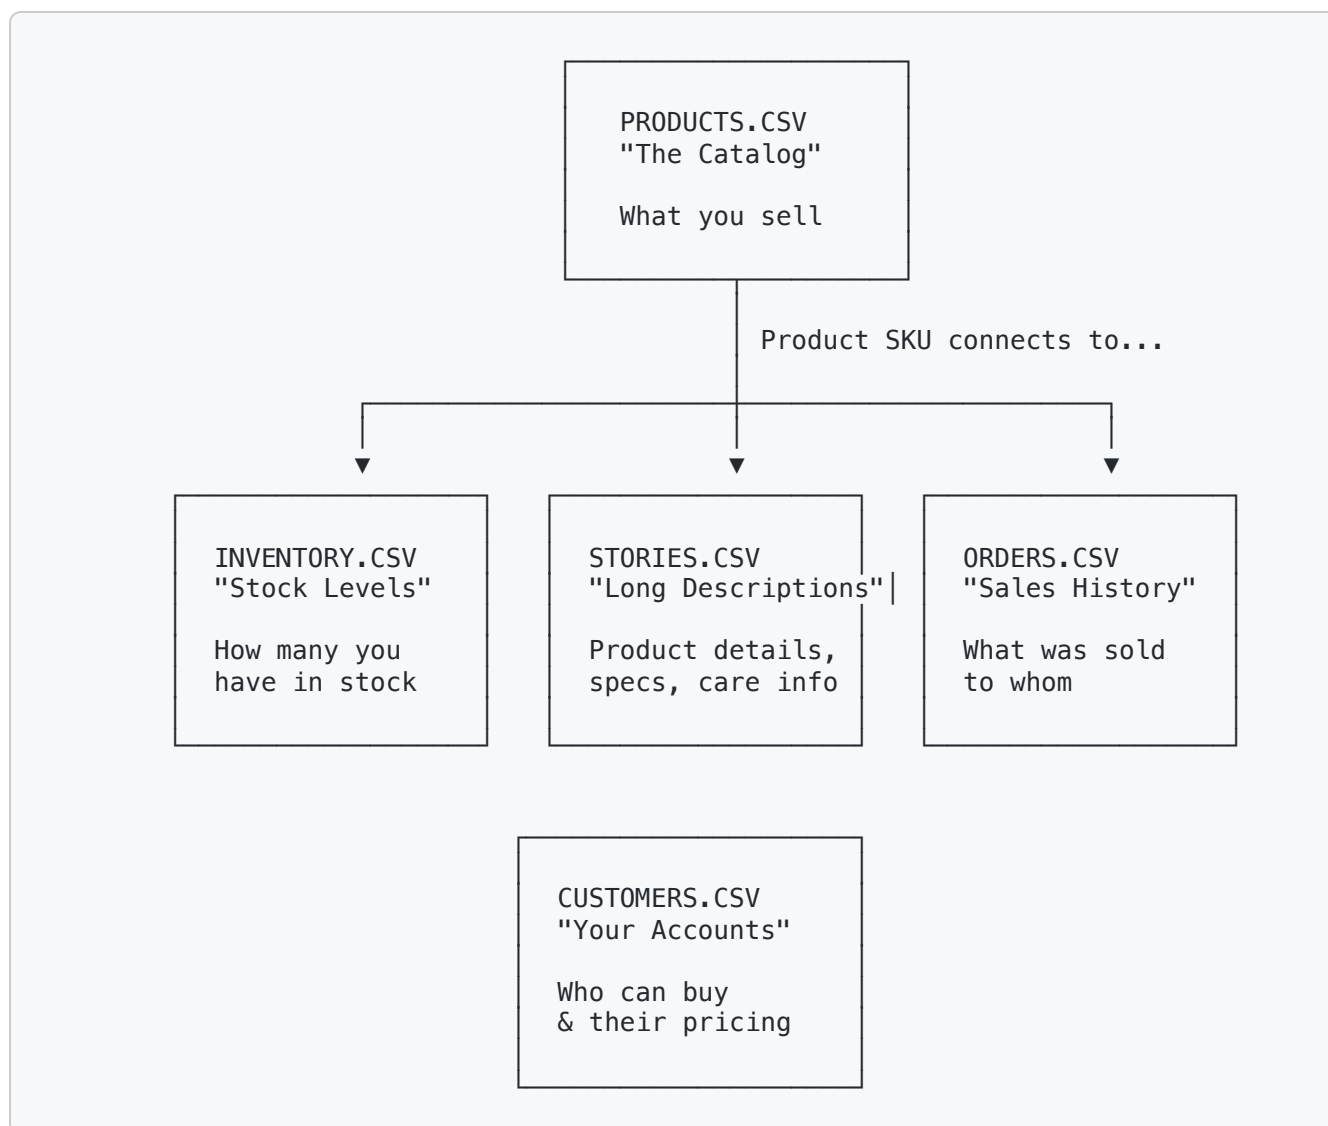

Upload to Admin Console

How the Files Connect: The Simple Version

Think of it like this: Your product catalog is the center of everything. The other files just add information to it.

Understanding Each File: What Goes Where

1. PRODUCTS.CSV - Your Product Catalog

What it is: The complete list of everything you sell

Where it comes from: Your ERP, product database, or master spreadsheet

Key Information:

REQUIRED:

- Product SKU (BaseItemCode)
- Product Name (LongDesc)
- Brand (TradeNameCode)
- Category (CategoryCodes)
- Price (NetPrice)
- Images (ImageFileName)

OPTIONAL:

- Product variations (OptionSets)
- Related products
- Custom fields
- Promo pricing
- Marketing copy

Example Row:

BaseItemCode: H0019-11559
 LongDesc: ABBERLEY 69'' HIGH 1-LIGHT FLOOR LAMP
 TradeNameCode: ELK (Elk Lighting)
 CategoryCodes: FLAMP (Floor Lamps)
 NetPrice: 150.00
 ImageFileName: H0019-11559.jpg

Where to manage in Admin Console: - Products > Products (edit individual items) - Products > Trade Names & Collections (organize by brand/line) - Products > Groups & Categories (organize by type)

2. CUSTOMERS.CSV - Your Customer Accounts

What it is: List of who can buy from you and where they want products shipped

Where it comes from: Your CRM, accounting system, or customer database

Key Information:**REQUIRED:**

- Customer Number (BillToCode)
- Customer Name
- Bill-To Address
- Ship-To Address(es)

IMPORTANT LINKS:

- Territory Code → Assigns to rep
- Price Code → Sets their pricing

OPTIONAL:

- Credit limit, quotas
- Contact info
- Account status

Example Rows:

Row 1: BillToCode=188, BillToName="APPLE GOLD", TerritoryCodes=13, ShipToCode=1
[Main account + first shipping location]

Row 2: BillToCode=188, ShipToCode=2
[Same customer, second shipping location]

Row 3: BillToCode=188, ShipToCode=3
[Same customer, third shipping location]

The Key Connection: - **TerritoryCodes** = Which sales rep(s) see this customer -
DefaultPriceCode = What pricing level this customer gets

Where to manage in Admin Console: - Users > Customers (manage accounts)

3. INVENTORY.CSV - Stock Levels

What it is: How many of each product you have in stock

Where it comes from: Your warehouse system, ERP, or inventory spreadsheet

Key Information:**REQUIRED:**

- Product SKU (BaseItemCode)
→ MUST match products.csv
- Qty Available ★

OPTIONAL:

- On order quantity
- Next receipt date
- Showroom quantity
- Warehouse location

Example Row:

BaseItemCode: H0019-11559
 QtyAvailable: 5 ← What reps can sell
 QtyOnHand: 10 ← Physical inventory
 QtyReserved: 5 ← Already allocated to orders

How it connects:

```

products.csv:  BaseItemCode = "H0019-11559"
                ↓
inventory.csv:  BaseItemCode = "H0019-11559", QtyAvailable = 5
                ↓
Result:        Product shows "5 Available" in eCat

```

Where to manage in Admin Console: - Tools > Import Data > Inventory (upload only, no manual editing)

4. STORIES.CSV - Long Product Descriptions

What it is: Extended product information like specs, care instructions, and marketing copy

Where it comes from: Your product database, marketing materials, or content management system

Key Information:

REQUIRED:

- Product SKU (BaseItemCode)
→ MUST match products.csv
- Product Story (long text)

USE CASES:

- Technical specifications
- Care & handling instructions
- "Product romance" copy
- Assembly instructions
- Warranty information

Example Row:

```

BaseItemCode: 1000
productstory: "Use this charming wine storage chest to add interest to
              a kitchen or other entertainment area. Featuring hand
              painted details of ancient Chinese court life and
              exquisitely antiqued solid brass hardware..."

```

How it connects:

```

products.csv:  BaseItemCode = "1000"
                LongDesc = "Wine Storage Chest"
                ↓
stories.csv:   BaseItemCode = "1000"
                productstory = [500+ character detailed description]
                ↓
Result:        Product shows short name in grid, full story in detail view

```

Where to manage in Admin Console: - Tools > Import Data > Product Stories

Optional Files

5. ORDERS.CSV - Sales History

What it is: Record of what was sold, to whom, and when

Where it comes from: Orders created in eCat iPad export to this format

Key Information:

EACH ORDER CONTAINS:

- Order number
- Order date
- Customer info
- Products ordered
- Quantities & prices

LINKS TO:

- Customer (via BillToCode)
- Products (via BaseItemCode)

This file flows FROM eCat
back to your ERP/system

Example Rows:

```

ordernumber: 0214764
customerbilltonumber: 12902  ← Links to customers.csv
itemnumber: 21445B          ← Links to products.csv
unitprice: 1542.50
quantityordered: 1

```

Where to manage in Admin Console: - Orders > Orders (view history) - Orders > Reports (analytics)

6. INVOICES.CSV - Invoicing Details

What it is: Invoice records showing what was billed and shipped

Where it comes from: Your ERP or accounting system

Key Information:

REQUIRED:

- Invoice number
- Order number
- Invoice date
- Quantities invoiced
- Net amount

LINKS TO:

- Orders (via ordernumber)
- Customer (via BillToCode)
- Products (via BaseItemCode)

Shows what was actually shipped and billed

Example Row:

```

invoicenumber: I275267
ordernumber: 0233051      ← Links to orders.csv
invoicedate: 2022-01-05
itemnumber: F3018/3AGB   ← Links to products.csv
quantityinvoiced: 1
netamount: 245.0
  
```

How it connects:

```

orders.csv:   ordernumber = "0233051"
              ↓
invoices.csv: ordernumber = "0233051"
              Shows what was actually invoiced/shipped
  
```

Where to manage in Admin Console: - Orders > Invoices (if enabled)

7. OPTIONS.CSV - Product Variations

What it is: Colors, finishes, sizes, fabrics - any way a product can be customized

Where it comes from: Your product configuration system or master options list

Key Information:

REQUIRED:

- Option Code (e.g., "100")
- Option Name (e.g., "Black")

OPTIONAL:

- Price adjustment
- Image file
- Description

How it works:

Step 1: Define options

Code: 100 = "Black"

Code: 101 = "White"

Code: 102 = "Gold"

Step 2: Group them (in Admin Console)

Group "FIN" = Finishes

Contains: 100, 101, 102

Step 3: Assign to products

products.csv: OptionSet1 = "FIN"

Step 4: User selects when ordering

Picks "Black" → Price adjusts automatically

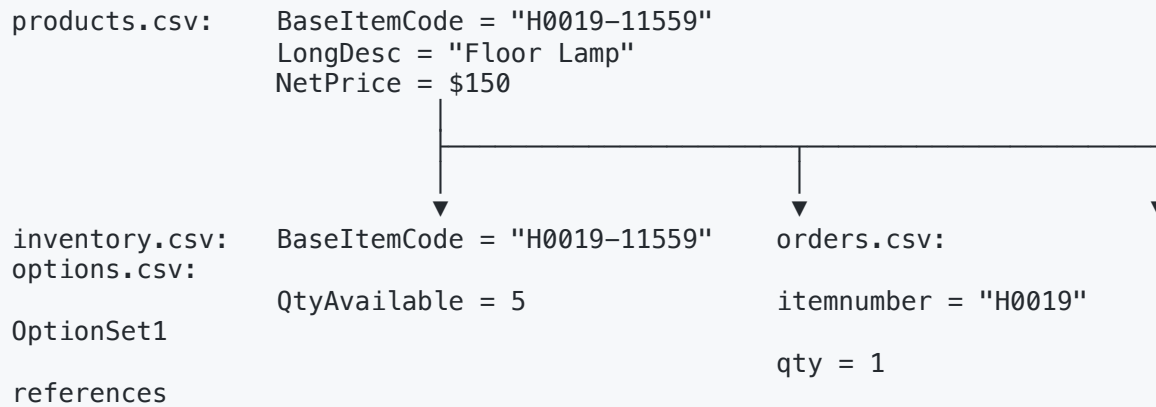

Where to manage in Admin Console: - Products > Options (manage options and groups)

The Three Critical Connections

These are the "magic links" that make everything work together:

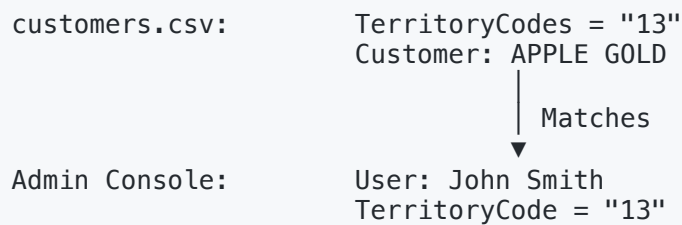

Connection #1: Product SKU Links Everything

The BaseItemCode (Product SKU) is your master key

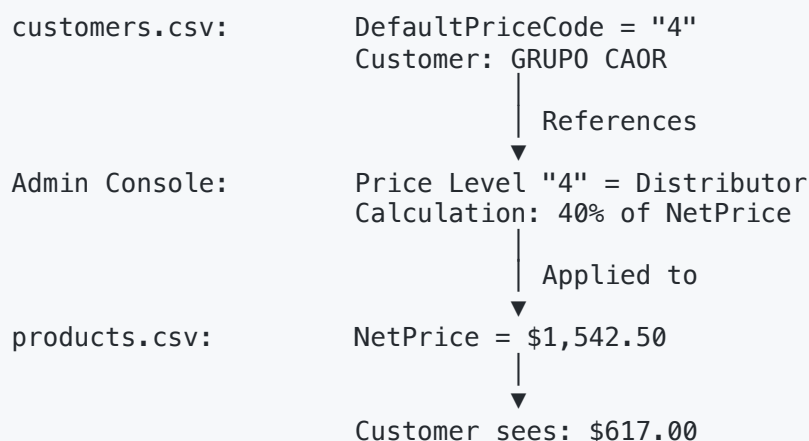

Result: When a rep views product H0019-11559, they see the name, price, stock level, and available options - all linked by that one SKU.

Connection #2: Territory Code Assigns Customers to Reps

Result: John Smith only sees customers assigned to territory 13 on his iPad.

Connection #3: Price Code Sets Customer Pricing

Result: Customer GRUPO CAOR automatically sees distributor pricing (40% off) on all products.

What You Configure in Admin Console (Not in Files)

Some things you set up directly in the Admin Console, not in CSV files:

1. Users & Territories

Location: Users > Users

- Create user accounts
- Assign territory codes (links to customers.csv)
- Set permissions (what they can do)

2. User Groups

Location: Users > User Groups

- Control which products users see (by brand/category)
- Control which customers users see (all vs. territory-only)
- Set pricing permissions

3. Price Levels

Location: Products > Price Levels

- Define price codes (referenced in customers.csv)
- Set calculations (e.g., "Code 4 = 40% of NetPrice")

Example:

Code: 0 → Net (100% of NetPrice)
Code: 4 → Distributor (40% of NetPrice)
Code: R → Retail (200% of NetPrice)

4. Taxonomy Display Names

Location: Products > Trade Names & Collections, Products > Groups & Categories

- Turn codes into friendly names
- Example: "ELK" → displays as "Elk Lighting"

How It All Flows Together

The Simple 4-Step Process

STEP 1: You Upload Files

Admin Console > Tools > Import Data

- products.csv, customers.csv, inventory.csv, options.csv
- Product images

↓

STEP 2: System Connects Everything

- Links inventory to products (via BaseItemCode)
- Links customers to reps (via TerritoryCodes)
- Links pricing to customers (via DefaultPriceCode)
- Validates all data

↓

STEP 3: Rep Syncs iPad

Each rep gets a personalized package:

- Only their products (based on User Group)
- Only their customers (based on Territory)
- Correct pricing for each customer
- Current inventory levels
- Works offline

↓

STEP 4: Orders Flow Back

Rep creates order → Syncs to server → Exports to your ERP

Quick Summary: The Three Things to Remember

1. Product SKU (BaseItemCode) Connects Everything

Your product SKU is the master key that links products to inventory, options, and orders.

2. Two Critical Codes Control Access

- **Territory Code** = Which customers a rep sees

- **Price Code** = What pricing a customer gets

3. Simple 4-Step Flow

Upload files → System connects them → Reps sync → Orders flow back

Document Version: 2.0 (Simplified)
