

INSIGHTFUL · CUSTOMER INTELLIGENCE

Braxton Culler

Customer Intelligence Report

April 2025 – April 2026 (Trailing 12 Months) · Report Date: April 17, 2026

Confidential — prepared for Braxton Culler use only

§1

Executive Summary

- 1

\$6.6M eCat GMV across 2,608 orders in the trailing 12 months. Braxton Culler’s eCat ordering delivered a steady cadence of 200+ orders per month with a near-even 50/50 iPad–eCat Online split by volume, while iPad drives 66% of GMV at a 1.9× AOV premium. → [Commerce Analytics](#)
- 2

Presentation tool adoption is the team’s biggest coaching lever. 13 of 19 qualifying reps have presentation-to-configuration ratios below 10% in the trailing 12 months; Jack Johnson’s 46% ratio correlates with the team’s highest AOV (\$5,688 vs. \$3,323 average). → [Sales Team](#)
- 3

20 top-selling products are currently out of stock. These items represent \$4.8M in proven all-channel demand, led by the Emily King Bed (\$440K). Only 4 of 20 have a scheduled receipt date, and 2 of those dates have already passed. → [Product](#)
- 4

\$185K in dormant account value ready for re-engagement. The top 5 lapsed eCat accounts — led by Halo Home (\$49K, dormant 136 days) and Kalin Home Furnishings (\$43K, dormant 123 days) — represent a direct path to recovering revenue that was already flowing through the platform. → [Customers](#)
- 5

Top quartile in value delivery among Furniture peers. Braxton Culler’s value delivery score of 90 is 20 points above the peer median of 70 in the trailing 12 months, with full feature adoption across all tracked platform capabilities. → [Peer Benchmarking](#)
- 6

6 data entities stale since August 2025. Matrix options, sales quotas, and 4 other supplemental entities trace back to a single import batch 240 days ago and have not been refreshed, creating configuration drift risk against the recently updated product catalog. → [Platform](#)

HIGH

Coach high-volume reps on presentation and discovery tools

Barbara Harper, Katrinka Barnhart, and Jaime Hernandez are high-volume reps with zero or near-zero presentation activity in the trailing 12 months. Closing the presentation gap could meaningfully lift order values across their combined volume.

+\$91K potential annual GMV

HIGH

Re-engage top 5 dormant accounts

These previously active buyers represent \$185K in historical eCat value. Targeted outreach to accounts that already know the platform offers the shortest path to revenue recovery — recovering even half of this cohort’s historical ordering pace could yield roughly \$90K in potential annual value.

\$185K historical value

MEDIUM

Prioritize restocking out-of-stock top sellers

\$4.8M demand at risk

20 items with \$4.8M in proven all-channel demand currently show zero availability. The fastest-accelerating products overlap significantly with the out-of-stock list — every day unavailable is a potential missed order opportunity.

MEDIUM

Re-import kit items and matrix options

Configuration alignment

2,086 kit configurations are 58 days stale and matrix options are 240 days stale while the product catalog was refreshed 3 days ago. Realigning these could prevent ordering errors or incorrect option displays.

AVG ORDER VALUE

trailing 12 months

Your top 10 reps account for 84% of iPad GMV in the trailing 12 months, with the top 5 driving 69%. Barbara Harper leads at \$848K across a single dedicated account, while Jerry Montini leads in breadth with \$814K across 32 unique customers.

REP	ORDERS	IPAD GMV	AOV	CUSTOMERS
Barbara Harper	307	\$848,295	\$2,763	1
Jerry Montini	184	\$814,051	\$4,424	32
Todd Teague	118	\$637,976	\$5,407	38
Sharyn Moss	180	\$413,216	\$2,296	48
Jack Johnson	54	\$307,163	\$5,688	20
Andrea Teague	48	\$229,113	\$4,773	22
Steve Billingsley	20	\$134,442	\$6,722	12
Katrinka Barnhart	48	\$98,116	\$2,044	27
Richard Goodman	40	\$96,707	\$2,418	12
Bobby Hansard	37	\$81,182	\$2,194	7
Tracey Thomas	26	\$73,956	\$2,844	9
Christie Schellenbach	33	\$63,157	\$1,914	2
Jaime Hernandez	43	\$62,241	\$1,447	0
Jane Harrington	27	\$55,889	\$2,070	0
Lorraine Hayes	16	\$52,949	\$3,309	0
Jeff Knight	15	\$51,247	\$3,416	7
Sara Buffington	17	\$44,757	\$2,633	8
Derek Campbell	17	\$39,370	\$2,316	0

REP	ORDERS	IPAD GMV	AOV	CUSTOMERS
Brian McKinney	4	\$35,220	\$8,805	4
Jacki Huelsenbeck	9	\$30,758	\$3,418	2

What this tells you: Your iPad selling team is heavily concentrated — the top 5 reps generate \$3.02M (69% of total GMV) in the trailing 12 months, and the top 10 cover 84%. The wide AOV range (\$1,447–\$8,805 among the top 20) reflects distinct selling strategies, from high-frequency relationship building to consultative high-value engagements. Barbara Harper’s single-account concentration (\$848K to one customer) is a standout risk worth monitoring alongside the coaching opportunities below.

Behavioral Scorecard

Platform engagement data reveals how your reps move through the selling workflow — from targeting customers, to browsing products, to configuring orders, to sharing presentations, to submitting. One team-wide pattern stands out in the trailing 12 months:

Team-Wide Presentation Gap

13 of 19 qualifying reps have a presentation-to-configuration ratio below 10% in the trailing 12 months. Your team configures orders extensively but rarely uses PDF catalogs, email sharing, or list-sharing tools to support the sales conversation. Jack Johnson is the notable exception — his 46% presentation ratio corresponds to the team’s highest AOV (\$5,688). Tracey Thomas also stands out with a 90% ratio and above-median AOV (\$2,844).

The table below spotlights reps with distinct behavioral patterns. Ratios are computed from platform engagement data over the trailing 12 months.

REP	DISCOVERY : TARGETING	CONFIG : DISCOVERY	PRESENT : CONFIG	AOV	PATTERN
Sharyn Moss	6.40	0.13	0.19	\$2,296	BALANCED WORKFLOW
Jack Johnson	4.85	0.19	0.46	\$5,688	CONSULTATIVE SELLER
Barbara Harper	3.08	0.28	0.00	\$2,763	NO PRESENTATION
Katrinka Barnhart	0.91	0.37	0.08	\$2,044	CUSTOMER-FIRST
Jane Harrington	5.88	0.07	0.00	\$2,070	BROWSE-HEAVY

Sharyn Moss is the highest-volume rep whose funnel ratios all pass threshold — she browses proportionally to her customer targeting, maintains adequate configuration depth, and actively uses presentation tools. Her workflow is the closest model for broader team adoption at high volume. **Jack Johnson** shows the strongest consultative pattern: 203 presentation events against 446 configurations (46% ratio) correlating with the team’s highest AOV (\$5,688, trailing 12 months). **Katrinka Barnhart** shows the most dramatic targeting-to-discovery gap — 3,096 customer targeting events but a 0.91 discovery ratio (threshold: 3:1), suggesting she selects customers repeatedly without proportional product browsing.

What this tells you: Your team’s strongest coaching lever is presentation tool adoption. The correlation between Jack Johnson’s 46% presentation ratio and his \$5,688 AOV — the team’s highest — suggests that sharing product information before submitting orders supports higher-value transactions. Sharyn Moss’s balanced funnel profile at high volume (\$413K, trailing 12 months) can serve as a training template for volume-focused reps.

Selling Archetypes

Based on platform engagement data over the trailing 12 months, your top reps fall into four distinct selling archetypes. These are coaching tools that describe behavioral patterns — not performance labels.

ARCHETYPE	REP(S)	SIGNATURE	IMPLICATION
DEEP-ACCOUNT SPECIALIST	Barbara Harper	Highest order volume (307 orders), single customer account, \$848K GMV, high customer targeting (1,695 events) — trailing 12 months	Exceptional relationship depth with extreme concentration risk — introduce adjacent accounts to diversify her base
VOLUME RELATIONSHIP SELLER	Sharyn Moss, Katrinka Barnhart	Most active days (529, 340), broadest customer reach (48, 27 customers), AOV below team median (\$2,296, \$2,044) — trailing 12 months	Need AOV support and value-selling tools, not breadth training; presentation coaching can shift from volume to value
CURATED DISCOVERY SELLER	Jack Johnson	Top-quartile presentation activity (203 events), strong product discovery (2,397), AOV well above team median (\$5,688) — trailing 12 months	Model consultative behavior — his workflow can serve as a training template for the broader team
PRECISION CLOSER	Steve Billingsley, Andrea Teague	Low product discovery (425, 695) relative to high configuration per order (12.6, 6.1), AOV well above median (\$6,722, \$4,773) — trailing 12 months	Know their products and go straight to configuration — need frequency incentives and territory expansion, not browsing coaching

Archetypes are coaching tools, not performance labels

Coaching should be adapted to selling style. A Volume Relationship Seller needs AOV support and presentation tools, not breadth training — they already have the widest customer reach. A Precision Closer needs frequency incentives and new account introductions, not configuration coaching — they already configure efficiently. The Curated Discovery Seller models the behaviors most correlated with high AOV.

What this tells you: Your two Volume Relationship Sellers (Sharyn Moss and Katrinka Barnhart) combine for 228 orders across 75 unique customers but carry AOVs 17–38% below team median in the trailing 12 months. Shifting even a portion of their volume toward consultative selling patterns — specifically, increased product discovery and presentation tool usage — represents the largest single AOV improvement opportunity on the team. Meanwhile, Barbara Harper’s Deep-Account Specialist pattern highlights a concentration risk: her \$848K in GMV flows through a single customer.

Coaching Opportunities

Barbara Harper ZERO PRESENTATION ACTIVITY

Barbara submitted 307 iPad orders in the trailing 12 months and generated \$848K in GMV — but has zero presentation events against 1,448 configuration events. She configures and submits directly without any buyer-facing sharing, all concentrated in a single account.

Recommended action: Introduce PDF catalog and email sharing workflows for her primary account. Even modest presentation adoption could reinforce pricing discussions on her already-high-volume orders and support cross-selling within the account.

+\$36K potential annual GMV

Katrinka Barnhart DISCOVERY GAP

Katrinka has 3,096 customer targeting events — the highest on the team — but a 0.91 discovery-to-targeting ratio (threshold: 3:1) in the trailing 12 months. She selects customers repeatedly without proportional product browsing. Her \$2,044 AOV is 26% below team median, and her orders are accelerating (+171% in the trailing 90 days).

Recommended action: Coach on product discovery workflow — search, filter, and collection browsing — to expand the range of products presented per customer visit. Her strong customer relationships (27 accounts) provide the foundation; broader discovery can raise order values.

+\$27K potential annual GMV

Jaime Hernandez DISCOVERY + PRESENTATION GAP

Jaime submitted 43 iPad orders (\$62K GMV) in the trailing 12 months at a \$1,447 AOV — 47% below team median. His discovery-to-targeting ratio is 2.39 (below 3:1 threshold) with zero presentation events against 263 configuration events.

Recommended action: Focus on two behaviors: broader product discovery after customer selection, and introducing presentation tools to support pre-order conversations. Both gaps suppress his AOV relative to peers at similar order volume.

+\$28K potential annual GMV

Jane Harrington

MOMENTUM AMPLIFICATION

Jane’s iPad orders surged from 4 to 22 (+450%) in the trailing 90 days, generating \$42K in current-quarter GMV. Her platform engagement data shows strong product discovery (5.88 ratio, 1,152 events) but a configuration gap — only 76 configuration events (0.07 config-to-discovery ratio, threshold: 0.10) in the trailing 12 months. She browses extensively but builds few configured orders.

Recommended action: Coach on order configuration workflow during her growth phase. Her strong discovery habits show product familiarity; converting more browsing into configured orders while she is accelerating makes coaching investments especially high-leverage.

+\$29K potential annual GMV

Rep Engagement Trajectory

Comparing the most recent 90 days against the prior 90 days, several reps show significant momentum shifts in both login activity and iPad order volume.

Top 5 Accelerating Reps (by order growth, trailing 90 days vs. prior 90 days):

REP	ORDERS (PRIOR → CURRENT)	ORDER CHANGE	LOGIN CHANGE	CURRENT 90D GMV
Jane Harrington	4 → 22	+450.0%	+30.0%	\$42,192
Katrinka Barnhart	7 → 19	+171.4%	+30.5%	\$35,987
Jerry Montini	34 → 58	+70.6%	+25.2%	\$323,058
Barbara Harper	52 → 77	+48.1%	+16.4%	\$227,365
Sharyn Moss	38 → 55	+44.7%	-6.3%	\$136,887

Top 5 Declining Reps (by order drop, trailing 90 days vs. prior 90 days):

REP	ORDERS (PRIOR → CURRENT)	ORDER CHANGE	LOGIN CHANGE	CURRENT 90D GMV
Andrea Teague	31 → 0	-100.0%	-95.2%	\$0
Jaime Hernandez	5 → 1	-80.0%	-39.1%	\$2,465
Steve Billingsley	6 → 3	-50.0%	+0.5%	\$9,775
Derek Campbell	5 → 3	-40.0%	+16.4%	\$9,730
Richard Goodman	12 → 8	-33.3%	+10.5%	\$9,570

Andrea Teague: Complete Disengagement

Andrea’s orders dropped from 31 to 0 (-100%) in the trailing 90 days and her logins dropped from 42 to 2 (-95%). She was your 6th-highest rep by annual iPad GMV (\$229K, trailing 12 months). This pattern — near-complete cessation of both login and order activity — may indicate a role change, leave of absence, or departure. Worth confirming with an immediate check-in given her historical contribution.

What this tells you: Five reps are accelerating meaningfully, with Jerry Montini (+71% orders, \$323K current-quarter GMV) and Barbara Harper (+48% orders, \$227K) driving the strongest momentum at significant volume. Jane Harrington’s +450% surge — though from a smaller base — signals a breakout trajectory worth reinforcing with configuration coaching. On the declining side, Andrea Teague’s complete disengagement warrants immediate attention given her \$229K annual contribution in the trailing 12 months.

Territory Coverage

Territory assignments show how many of each territory’s assigned accounts have ordered through eCat in the trailing 12 months. Accounts not ordering via eCat may be purchasing through other channels — the gap represents untapped eCat activation opportunity, not necessarily lost business.

TERRITORY	ASSIGNED ACCOUNTS	ECAT ACTIVE	ACTIVATION RATE	NOT YET ACTIVE VIA ECAT
125	305	56	18%	249
120	238	45	19%	193
135	216	52	24%	164
100	160	18	11%	142
127	121	41	34%	80
151	117	9	8%	108
186	110	35	32%	75
999	104	8	8%	96
116	82	29	35%	53
110	81	10	12%	71

Highest eCat Penetration: Territories 116 and 127

Territories 116 (35% activation, \$333K eCat GMV) and 127 (34%, \$1.19M eCat GMV) lead in account penetration in the trailing 12 months. Territory 127 combines strong penetration with the second-highest GMV across all territories. The activation approach in these territories could inform strategies for territories 100 (11%), 151 (8%), and 999 (8%) where large assigned bases remain largely untapped.

What this tells you: Across the top 10 territories by assigned volume, roughly 19% of accounts have ordered via eCat in the trailing 12 months. Territories 125 (249 dormant accounts), 120 (193), and 135 (164) have the largest absolute gaps. Prioritizing eCat activation in these high-assignment territories — where account relationships already exist — represents a significant channel expansion opportunity without requiring new account acquisition.

▼ Details

§3 Customer & Buyer Intelligence

374 active buyers (trailing 12 months) · 64.8% retention · 203 lapsed accounts · 1,411 never activated

Customer Activation & Network Health

Of 1,988 total account records, 577 have placed at least one eCat order. In the trailing 12 months, 374 of those accounts remained active—a 64.8% retention rate. Meanwhile, 1,411 accounts (71.0% of your full account base) have never placed an eCat order, representing a substantial untapped activation opportunity.

New Buyer Retention Signal

Among 303 new buyers acquired in the trailing 12 months, 44.2% returned to place a repeat order within 90 days. This early-stage retention rate indicates strong engagement once accounts are onboarded to the platform.

What this tells you: Roughly a third of activated accounts have lapsed—203 accounts that previously ordered through eCat have gone quiet. The primary growth opportunity is two-pronged: re-engaging lapsed accounts and activating the 1,411 accounts that have never ordered. The 44.2% 90-day repeat rate among new buyers confirms that once accounts are onboarded, nearly half become repeat customers quickly.

Dormant High-Value Accounts

These accounts were previously active on eCat but have gone dormant, prioritized by historical order value. The top 5 dormant accounts alone represent \$185K in past eCat ordering activity.

ACCOUNT	REGION	LAST ECAT ORDER	DAYS DORMANT	HISTORICAL ECAT VALUE

High-Value Recovery Target

Halo Home (North Carolina) placed 15 eCat orders worth \$48,968 historically and has been dormant for 136 days. Combined with Kalin Home Furnishings (\$42,575, dormant 123 days), these two accounts alone represent \$91.5K in recoverable ordering value.

What this tells you: Twenty-five previously active accounts have gone dormant, with the top 5 representing \$185K in historical eCat ordering value. Targeted re-engagement—particularly with Halo Home and Kalin Home Furnishings—offers a direct path to recovering revenue that was already flowing through the platform.

Geographic Distribution

eCat ordering activity in the trailing 12 months is concentrated along the East Coast. North Carolina, New Jersey, and Florida together account for \$2.3M—35.0% of total eCat order value across all regions.

STATE	ACTIVE CUSTOMERS	ECAT ORDERS (TRAILING 12 MONTHS)	ECAT GMV (TRAILING 12 MONTHS)
NC	35	377	\$873,302
NJ	36	329	\$762,155
FL	51	292	\$672,862
SC	19	154	\$541,016
DE	12	121	\$506,385
GA	33	98	\$339,288
PA	15	89	\$242,836
VA	8	96	\$172,938

MI	20	56	\$144,032
NY	16	53	\$94,902
IL	12	62	\$82,423
AL	4	27	\$56,771
MD	8	20	\$44,497

STATE	ACTIVE CUSTOMERS	ECAT ORDERS (TRAILING 12 MONTHS)	ECAT GMV (TRAILING 12 MONTHS)
CO	1	15	\$37,156
WI	4	16	\$30,616
ME	3	31	\$24,280
BW	1	6	\$20,406
CA	7	10	\$19,028
TN	4	4	\$18,683

Concentration Signal: Delaware

Delaware stands out with only 12 customers generating \$506K in eCat orders (trailing 12 months)—averaging \$42,199 per customer. This is 3.2× the per-customer average in Florida (\$13,193). The high concentration means significant revenue exposure if any of these accounts churn.

What this tells you: Your eCat ordering footprint is concentrated along the East Coast, with the top 5 states driving 51% of platform order value in the trailing 12 months. Delaware represents a high-value pocket with outsized per-customer revenue—worth monitoring for retention risk given its small account count.

Reorder Velocity & Early Warning

Among buyers with 3 or more eCat orders in the trailing 12 months, the top 5 highest-frequency accounts are ordering at a remarkable pace.

ACCOUNT	ECAT ORDERS (TRAILING 12 MONTHS)	ECAT GMV (TRAILING 12 MONTHS)	AVG DAYS BETWEEN ORDERS
Outer Banks Furniture	97	\$183,453	3.7
W.F. Booth & Son, Inc.	76	\$118,817	4.8
Guthrie Interiors	64	\$106,310	5.5
Trident Furnishings Inc	61	\$130,900	5.9
Furniture & More	56	\$91,723	6.5

Power Buyers

Outer Banks Furniture and W.F. Booth & Son average an eCat order every 3.7 and 4.8 days respectively, and together account for \$302K in eCat ordering value in the trailing 12 months. These two accounts warrant proactive relationship management given their outsized contribution.

No accounts in the trailing 12-month reorder dataset show explicit deceleration flags. All 20 tracked accounts with 3+ orders remain active with their most recent order within the last 30 days.

What this tells you: Your highest-frequency buyers are ordering at an exceptional cadence—the top two place orders every 4–5 days. No early churn warnings are flagged among repeat buyers in the trailing 12 months, indicating healthy and sustained ordering velocity across your most active accounts.

New eCat Buyer Acquisition

161

NEW ECAT BUYERS (TRAILING 15 MONTHS)

0728-080	Bedford RSF 1-Arm Sofa	\$118,231	128	0	—

What this tells you: Your highest-demand products are currently unavailable. The Emily King Bed alone has generated \$440K in all-channel sales and shows negative availability, with a receipt date that has already passed. Prioritizing replenishment for the Bel-Air, Bedford, and Weston families—which together account for multiple OOS items—would have the largest impact on order fulfillment.

New Introduction Performance

Performance of products flagged as new introductions, measured by all-time all-channel invoiced sales. 368 items across 30 collections are currently flagged as new.

COLLECTION	NEW ITEMS	INVOICED SALES	UNITS SOLD	SALES/ITEM
COL119	14	\$23,290	23	\$1,664
COL46	16	\$18,974	18	\$1,186
COL11	12	\$11,185	27	\$932
ROWAN	16	\$6,760	22	\$423
FLORA	5	\$2,845	4	\$569
JUNE	6	\$2,590	10	\$432
LUMA	11	\$2,300	2	\$209
VERA	9	\$975	3	\$108
LORNA	5	\$790	2	\$158
COL61	55	\$733	12	\$13
CORA	26	\$510	1	\$20

19 collections with \$0 invoiced sales: ARIA (26 items), COL29 (98 items), RUTH (8 items), ISLA (7 items), CLARA (7 items), BALI (6 items), COL105 (6 items), COL71 (6 items), COL70 (5 items), and 10 others totaling 220 items. These items may be ordered but not yet invoiced, or may need additional merchandising support.

New Item Revenue Concentrated in 3 Collections

COL119, COL46, and COL11 account for \$53,449 of the \$70,952 total new-item invoiced revenue (75%), all-time. Meanwhile, 19 of 30 collections with new items show \$0 in invoiced sales—notably COL29 (98 items) and ARIA (26 items). These collections may benefit from increased rep visibility or promotional positioning.

What this tells you: New introductions are generating early revenue in a handful of collections, but the majority have not yet converted to invoiced sales. Focusing rep attention on zero-revenue collections with significant item counts—particularly the 98-item COL29 group—could accelerate new product adoption.

Product Velocity Trend

All-channel order velocity comparing the recent 90-day window (February–April 2026) against the prior 90-day window (November 2025–January 2026), measured by order count. Items without a product catalog match are excluded.

DIRECTION	ITEM CODE	CATEGORY	RECENT 90D	PRIOR 90D	VELOCITY CHANGE
▲	0848-026	BEDS	42	0	ACCELERATING
▲	0705-081	CAT21	21	0	ACCELERATING
▲	0510-005	CAT1	20	0	ACCELERATING
▲	0807-026	BEDS	20	0	ACCELERATING
▲	0728-011	SOFAS	19	0	ACCELERATING
▼	1908-005	CAT1	0	6	-100%
▼	1929-001	CAT1	0	6	-100%
▼	1923-001	CAT1	0	5	-100%
▼	1968-072	CAT6	0	4	-100%
▼	1904-001	CAT1	2	5	-60%

The top accelerating items—Emily King Bed, Bel-Air sectional components, and Bedford Sofa—show strong recent all-channel order momentum. Three of these five accelerating items also appear on the out-of-stock list, making inventory replenishment especially urgent. Declining items (Bali Swivel Chair, Saylor Accent Chair, Melody Accent Chair) saw consistent prior-period orders but have dropped to zero in the recent window and may warrant clearance positioning or promotional refresh.

What this tells you: Your fastest-accelerating products overlap significantly with your out-of-stock list. Prioritizing inventory for the Emily King Bed (42 orders in the recent 90 days) and the Bel-Air and Bedford families could recover lost momentum. Declining items should be evaluated for clearance or repositioning to free up catalog space.

Catalog Completeness

Current snapshot of the product catalog as of April 2026.

VISIBILITY	PRODUCTS	MISSING IMAGES	MISSING PRICE	COMPLETE %
Visible	3,417	207	394	82.4%

Catalog Completeness Below 90%

394 visible products are missing pricing and 207 are missing images as of the current snapshot. Products without pricing cannot be ordered through the catalog, effectively removing them from the sales workflow. Addressing the pricing gaps alone would lift completeness to approximately 94%.

What this tells you: With 601 products missing either an image or pricing, nearly 1 in 6 catalog items presents an incomplete experience. Resolving the 394 pricing gaps is the highest-leverage fix—it would make those items orderable and push completeness past 90%. The 207 missing images are a secondary priority that would improve the browsing experience.

What’s Selling

Broad Revenue Distribution — Bedford and Bel-Air Lead

Chairs (CAT1) lead all-time category sales at \$5.8M, but the top 5 categories collectively span upholstery, beds, and dining—reflecting a diverse product mix. At the collection level, Bedford and Bel-Air lead at \$1.8M each, all-time all-channel. The top 5 collections represent 28% of all-channel sales, indicating a well-distributed revenue base with no single-collection concentration risk.

COL145 (Leighton)	1	424	\$310,596
COL72 (Memphis)	18	284	\$271,527
COL61	407	6,577	\$263,945

What this tells you: Revenue is well distributed across collections, with no single collection exceeding 7% of all-channel sales. Bedford and Bel-Air lead at \$1.8M each, reflecting deep sectional and sofa demand. Pine Isle stands out for unit efficiency—3,024 units from just 14 items. Collections like COL61 (407 items, \$264K all-time) may have excess catalog depth relative to demand.

Apr 2025	91	\$234,376	\$2,576

eCat order volume has been consistent, averaging roughly 217 orders per month over the trailing 12 months. March 2026 posted the highest order count at 259, while February 2026 delivered the highest AOV at \$3,160. The most recent full quarter (January–March 2026) produced 714 orders and \$1.86M in GMV.

All-channel business data from your business system is also flowing, with March and April 2026 showing the most complete visibility. In March 2026, total all-channel business was \$1.04M across 815 orders and in April 2026, \$824K across 598 orders—providing growing context for eCat's role within your broader order volume. See the All-Channel Business Context subsection below for details.

What this tells you: Braxton Culler's eCat ordering has established a steady cadence of 200+ orders per month over the trailing 12 months, with \$6.6M in total GMV. The November 2025 and February 2026 AOV spikes (\$3,309 and \$3,160) suggest seasonal lift in higher-value ordering that could inform future promotional timing.

AOV by Order Segment — Trailing 12 Months

\$2,526

OVERALL ECAT AOV (LTM)
2,608 orders

\$3,323

IPAD AOV (LTM)
1.9× eCat Online AOV

\$1,715

ECAT ONLINE AOV (LTM)
1,293 orders

SEGMENT	ORDERS (LTM)	AVG ORDER VALUE	TOTAL GMV
All eCat Orders	2,608	\$2,526	\$6,586,776
iPad Orders	1,315	\$3,323	\$4,369,777
eCat Online Orders	1,293	\$1,715	\$2,216,999
Quote Orders	27	\$2,732	\$73,767

iPad orders carry a **1.9× AOV premium** over eCat Online (\$3,323 vs. \$1,715, trailing 12 months). While order counts are nearly identical between the two channels, iPad accounts for 66.3% of total eCat GMV—reflecting the rep-driven dynamic where iPad orders involve more curated, higher-value transactions.

What this tells you: The iPad channel drives two-thirds of eCat order value despite equal order volume with eCat Online. This reflects the natural dynamics of rep-assisted selling (larger, more complex orders) versus buyer self-service (smaller, more frequent reorders). Both channels are healthy and complementary.

eCat Ordering Channel Breakdown — Trailing 12 Months

All eCat orders originate from one of two sources: iPad (rep-submitted) or eCat Online (buyer self-service).

1,315

IPAD ORDERS (LTM)

May 2025	122	110	52.6%
Apr 2025	47	44	51.6%

Balanced Dual-Channel Adoption

The iPad–eCat Online order split has remained near 50/50 for 12 consecutive months. This balance indicates healthy adoption of buyer self-service alongside sustained rep usage—a hallmark of a mature dual-channel ordering program.

What this tells you: Your ordering channel is effectively split 50/50 by volume, with iPad consistently driving higher average values. The stability of this balance over 12 months suggests both channels have found their natural role—reps for higher-value, consultative orders and eCat Online for routine buyer reorders.

Top Buyers & Concentration — Trailing 12 Months

Top 10 buyers by eCat GMV out of \$6,586,776 total trailing 12 months. Top 5 buyers represent 14.3% of eCat GMV—a highly diversified buyer base with no meaningful concentration risk.

CUSTOMER	ORDERS	GMV	% OF ECAT GMV
Outer Banks Furniture	97	\$183,453	3.6%
Trident Furnishings Inc/ Donaway	2	\$159,305	3.2%
Trident Furnishings Inc	61	\$130,900	2.6%
Steven Shell LLC	21	\$127,260	2.5%
W.F. Booth & Son, Inc.	76	\$118,817	2.4%
Guthrie Interiors	64	\$106,310	2.1%
Furniture & More	56	\$91,723	1.8%
Osborne's Furniture	33	\$89,864	1.8%
Styled By Sean	25	\$87,593	1.7%
Casual Designs Furniture Inc	21	\$85,529	1.7%

Buyer Profile Contrast

The top 10 reveals two distinct ordering profiles. **Outer Banks Furniture** and **W.F. Booth & Son** are high-frequency, moderate-value buyers (97 and 76 orders respectively, trailing 12 months). In contrast, **Trident Furnishings Inc/ Donaway** shows a low-frequency, high-value pattern (2 orders, \$159K in GMV). Both profiles contribute to a balanced revenue mix.

What this tells you: Braxton Culler's eCat buyer base is highly diversified—no single buyer exceeds 3.6% of total GMV, and the top 10 combined account for just 23.4%. This well-distributed profile minimizes concentration risk and means no single account loss would materially impact eCat revenue.

Order Type & Workflow — Trailing 12 Months

ORDER TYPE	ORDERS	% OF ORDERS	TOTAL GMV	AVG VALUE
Confirmed	2,580	98.9%	\$6,511,569	\$2,524
Quote	27	1.0%	\$73,767	\$2,732
HFC	1	0.0%	\$1,440	\$1,440

98.9% of orders are confirmed—reps overwhelmingly submit clean, ready-to-process orders. Quote volume is modest at 27 orders (1.0% of total, trailing 12 months), carrying a slightly higher average value of \$2,732 vs. \$2,524 for confirmed orders. The minimal HFC volume (1 order) indicates negligible hold-for-confirmation friction in the workflow.

Quote Workflow Opportunity

With only 27 quote orders in the trailing 12 months across the full rep team, quote adoption is low. Quotes carry a \$2,732 average value and are well-suited for complex or large-quantity transactions. Expanding quote usage could shift more high-consideration sales into the eCat workflow.

What this tells you: Braxton Culler's eCat ordering workflow is clean and efficient. Nearly all orders move straight to confirmed status, which reduces processing overhead. The quote workflow is an under-leveraged tool that could help capture more complex transactions through the platform.

All-Channel Business Context

All-channel business data from your business system provides context for eCat ordering within your broader sales volume. This data feed has recently established visibility, with March and April 2026 showing the most complete picture.

March and April 2026 show substantially fuller data than earlier months, reflecting a recently established data connection with your business system. As this feed matures and historical data fills in, it will enable a complete view of how eCat-originated orders contribute to your total business volume across all channels.

What this tells you: All-channel business data is now flowing, with March 2026 showing 815 orders across 204 accounts and \$1.04M in revenue. As this data feed stabilizes over the coming months, it will provide a fuller picture of eCat's contribution to your total business and unlock deeper cross-channel insights.

▼ Details

§7 **Peer Benchmarking**

Q4 in value delivery & engagement, Q2 in orders per user & catalog completeness vs. Furniture peer group (trailing 12 months)

Peer Group Overview

Your comparison group is made up of Furniture manufacturers on the same platform bundle. These comparisons are drawn from a focused group of similar accounts on the same platform bundle. Trends are meaningful; point-in-time figures should be read directionally.

What this tells you: These benchmarks compare your team's trailing 12-month platform usage to a focused group of Furniture manufacturers running the same platform configuration. Use the patterns and relative positioning to identify where you lead and where the clearest opportunities exist.

Benchmark Overview

ORDERS PER USER

0.55

Bottom 35%

Your reps average 0.55 orders each in the last 90 days — the peer median among Furniture manufacturers on the same platform is 1.12, a gap of 0.57 orders per user. With 71 total platform users, increasing per-rep submission frequency is the most direct lever for closing this gap.

ORDERS (90-DAY)

Order volume is 755 in the last 90 days — the peer median among comparable Furniture accounts is 852, a gap of roughly 100 orders. The shortfall is modest in absolute terms but consistent with the per-user gap above.

VALUE DELIVERY

Value delivery is at 90 out of 100 in the trailing 12 months — 20 points above the peer median of 70 among Furniture manufacturers on the same platform. Your team is extracting significantly more core value from the platform than comparable accounts.

ENGAGEMENT

Rep engagement is at 40 out of 100 in the trailing 12 months, placing your team in the top quartile among comparable Furniture accounts on the same platform. The peer median is also 40, but your team’s engagement consistency places it above most accounts in the group.

ADOPTION

Platform adoption is at 90 out of 100 in the trailing 12 months, matching the peer median of 90 among Furniture manufacturers on the same platform. Your team is using the platform’s capabilities at the same depth as the strongest accounts in the group.

DATA & OPERATIONAL HEALTH

Catalog freshness and import health at 88 out of 100 in the trailing 12 months — 12 points above the peer median of 76 among Furniture manufacturers on the same platform. Your data pipeline is more current than the typical account in this group.

TRAJECTORY

Above Median

Trajectory is at 60 out of 100 in the trailing 12 months, 5 points above the peer median of 55. Recent usage trends are moving in the right direction relative to comparable Furniture accounts.

CATALOG COMPLETENESS

Below Median

Catalog completeness is at 82% — the peer median among comparable Furniture accounts on the same platform is 95% in the trailing 12 months, a 13-point gap. Closing this gap through image and pricing data updates would bring your catalog in line with the group standard.

What this tells you: Your team leads in value delivery and engagement — two metrics that reflect how effectively reps use the platform day-to-day. The primary gaps are in orders per user and catalog completeness, both of which are actionable: increasing per-rep submission frequency and updating product images and pricing data are the most direct paths to closing the distance to peers.

What Top Performers Do

- ▲ **Full feature activation** — The top-performing Furniture accounts activate all 8 available platform capabilities in the trailing 12 months. Braxton Culler is at 7, one capability short of the maximum used by the leading accounts in the group.
- ▶ **High order-to-login ratio** — Leading accounts submit more than one order per login session in the trailing 12 months, treating each platform visit as a productive ordering opportunity. Your team's 1,877 orders against 8,270 logins shows a ratio of roughly 0.23 — there is room to deepen per-session productivity.
- ▲ **Scale through concentrated usage** — The most active accounts in the trailing 12 months generate over 30,000 order events, compared to the group median below 7,000. Concentrated, high-frequency usage is a defining trait of the top tier.
- ▶ **Consistent data imports across all entity types** — Accounts with the strongest data freshness profiles import options, categories, and price levels on the same cadence as products and inventory in the trailing 12 months, keeping configuration data current across the full catalog.

What this tells you: The common thread among top-performing accounts is full feature activation combined with high-frequency, productive platform sessions. Closing the gap from 7 to 8 capabilities and encouraging reps to submit more orders per session are the most direct paths to match top-tier patterns.

Feature Adoption

FEATURE / CAPABILITY	YOUR STATUS	PEER ADOPTION RATE
Product Library	ACTIVE	100% of peers
PDF Catalog	ACTIVE	100% of peers
Sales Portal	ACTIVE	66% of peers
Order History Import	ACTIVE	66% of peers
Configured Item Ordering	ACTIVE	40% of peers
Kit & Bundle Configuration	ACTIVE	28% of peers

What this tells you: Every tracked feature is active on your account, including configured item ordering and kit configuration — capabilities used by fewer than half of comparable accounts. This full-breadth activation is a competitive advantage and aligns with the top-performer pattern of maximizing platform depth.

§8 Platform & Feature Utilization

30 of 38 features active · 6 stale entities · 104 smart stacks · import pipeline active

Catalog Health

The catalog contains 3,417 visible products with 82.4% completeness as of the current snapshot. 394 products are missing pricing and 207 are missing images. The Sales Portal, Online Catalog, and Online Ordering are all enabled. 163 shared resources are available in the content library, and 104 Smart Stacks provide curated product groupings—all updated within the last 3 days. The platform serves 72 active user accounts, with 53 users logged in within the last 90 days and 1,551 customer enrollments.

What this tells you: Your platform infrastructure is robust with all three core modules active and a large Smart Stack library. The primary gap is catalog completeness at 82.4%—addressing the 394 pricing gaps would make those products orderable and lift completeness past 90%.

Deep Library and Configuration Adoption

Library content views (17,888 events all-time) are the second-most-used feature after product search, indicating reps actively reference marketing materials and product documentation. Configured item ordering (7,629 events) and kit views (1,166 events) show strong adoption of product customization workflows. The top 10 users by engagement account for approximately 66% of all events, which is typical for enterprise sales teams.

What this tells you: Your team uses 30 of 38 available features across 71 users, with deep engagement in product search, library content, and configured ordering. The breadth of adoption—from catalog browsing through order submission, plus content sharing and PDF creation—shows the platform is a central part of your sales operation. Encouraging mid-tier users to explore features like SmartPick and list sharing could further deepen engagement.

Data Health Report

Across 22 tracked data entities as of the current snapshot: 14 FRESH 2 MONITOR 6 STALE

Fresh (updated within 30 days): Products, Categories, Collections, Groups, Trade Names, Smart Stacks (3 days), Options and Option Groups (21 days), Riser Prices (4 days), Inventories, Customers, All-Channel Orders, All-Channel Invoices, Customer Favorites (today). Core catalog and transactional data is current and well-maintained.

Monitor (updated 31–180 days ago): Kit Items (58 days) and Price Levels (44 days). Both have drifted from the recently refreshed product catalog.

All 6 stale entities share the same import date (240 days ago), indicating they originated from a single import batch that has not been refreshed. Actionable entities are highlighted.

ENTITY	LAST UPDATED	DAYS SINCE UPDATE
Matrix Options	Aug 20, 2025	240
Sales Quotas	Aug 20, 2025	240
Contract Prices	Aug 20, 2025	240
Commitment Reports	Aug 20, 2025	240
Placement Reports	Aug 20, 2025	240
Customer Payment Info	Aug 20, 2025	240

What this tells you: Core catalog data (products, customers, inventory) is current and automatically refreshed. The 6 stale supplemental entities all trace back to a single August 2025 import. Refreshing matrix options would ensure product configurations stay aligned with your current catalog, and importing sales quota targets would enable rep-level goal tracking.

Data Pipeline Health

Import activity over the trailing 6 months (October 2025–March 2026) shows a consistent, high-frequency pipeline averaging approximately 134 imports per month.

MONTH	IMPORTS
Apr 2026 MTD	108
Mar 2026	151
Feb 2026	98
Jan 2026	119
Dec 2025	111
Nov 2025	175

MONTH	IMPORTS
Oct 2025	152

April 2026 is tracking at 108 imports through mid-month, on pace for the highest month in the trailing period. Recent imports are processing cleanly, with only one recurring minor warning for an unmatched inventory item across the last 10 imports.

What this tells you: Your data import pipeline is healthy and high-frequency with no gaps in the trailing 7 months. The consistent cadence of 100–175 imports per month ensures your sales team works with current product, customer, and inventory data.

Platform Configuration Alerts

Four configuration issues identified as of the current snapshot where feature data has drifted out of alignment with the core product catalog or remains unestablished.

FEATURE	STATUS	ISSUE	ACTION
Kit Items	DRIFT	2,086 kit configurations last imported 58 days ago; product catalog refreshed 3 days ago	Re-import kit items file alongside next product update
Price Levels	DRIFT	Price level data last updated 44 days ago; products refreshed 3 days ago	Re-import price levels to align with current catalog
Matrix Options	STALE	Last imported 240 days ago (August 2025) while options were refreshed 21 days ago	Re-import matrix options to reflect current product configurations
Sales Quotas	NOT ESTABLISHED	Feature available but no quota targets have been imported (0 records, last touched 240 days ago)	Import quota targets to enable rep-level goal tracking

What this tells you: Two data drift issues exist where product data has been refreshed but kit items and price levels have not followed. The kit items gap is the most urgent—2,086 kit configurations may reference outdated product data, potentially causing ordering errors. Importing sales quotas is optional but would unlock rep-level performance tracking.

Smart Stack Performance

104 SMART STACKS CONFIGURED All updated within 3 days	0 STALE STACKS None over 90 days old	85 SMARTPICK VIEWS All-time cumulative
--	---	---

104 Smart Stacks are configured and actively maintained, with every stack updated within 3 days of the report date. Zero stacks are stale. The stacks map to showroom bays, outdoor settings, regional showrooms, fabric collections, and specialty groupings (closeouts, sleepers, in-stock items). SmartPick—which surfaces Smart Stack recommendations to reps in the catalog—has recorded 85 views all-time across the user base.

What this tells you: Your Smart Stack library is exceptionally well-maintained at 104 curated collections with zero staleness—among the deepest Smart Stack deployments on the platform. The stacks are clearly organized around your showroom layout and product families. SmartPick views (85 all-time) suggest early-stage adoption of automated recommendations; encouraging reps to use SmartPick during customer interactions could increase the value of this investment.

§9 **Appendix**

Data sources and attribution

eCat Orders	Submitted eCat orders from the platform database. Data current as of April 2026.
Total Business (All Channels)	Orders synced from Braxton Culler’s business system — includes all channels: eCat, phone, EDI, trade shows, showroom, and any other origin. Total all-channel business, not buyer self-service activity. Data current as of April 2026.
Customer Data	Account records from Braxton Culler’s business system as of April 2026.
Inventory Data	Point-in-time inventory snapshot as of April 17, 2026. We cannot determine how long any item has been out of stock.
Historical Sales Data	All-time invoiced sales history from Braxton Culler’s business system. No invoice date available — figures are all-time cumulative, not period-specific.
Rep Engagement Data	Platform engagement event data aggregated per user. All-time cumulative totals as of April 2026.
Peer Benchmark Data	Anonymized median and percentile data from Furniture / Full accounts. No individual account data is disclosed. Run date: April 14, 2026. These comparisons are drawn from a focused group of similar accounts on the same platform bundle. Trends are meaningful; point-in-time figures should be read directionally.
Platform Configuration	Platform feature and configuration data as of April 2026.
